

Details of Business

- Engineered Products Division

The Engineered Products division (EPD) is associated with world leaders in different high technology application areas such as sound and vibration, environment simulation, process instruments, electromechanical components and electrical test and measuring instruments. EPD adds value to these products and delivers complete engineering solutions, backed by efficient service and application support to various industries in segments such as automotive, aerospace, oil & gas, defence, power, steel, engineering, railways. Customers buying imported instruments often require local help for their installation and commissioning. The company is in position to supply engineering services for these activities.
