Our next issue for more details on Material Handling Solutions.

Does improper use of Material Handling Equipment affect your productivity..?
Are you taking a 'BIG RISK' with your untrained MHE operators..?

Material handling operations is an integral part of supply chain activities and it has to be as strong as any other link in the chain. Efficient and safe operations of the Material Handling Equipments (MHE) can add to this strength in a much greater way.

It has been observed very often that improper use of MHE's not only affects productivity adversely, but also causes direct and indirect losses. Machine breakdown are often caused by wrong operations, machine abuse and accidents happens due to operator ignorance or indifference, or both. Hence proper training about safety, care, operations and periodic maintenance can go a long way in addressing such issues. Also, a properly

trained operator can contribute in lowering operating costs by reducing spares consumption, improved safety and enhancing performance through proper care and use of the equipment.

Josts, with more than half a century of experience in this field, addresses such critical issues through the "MHE OPERATOR'S TRAINING MODULE". Josts training program (MHE OPERATOR'S TRAINING MODULE) is designed in such a way that boosts safety, awareness, efficiency and confidence levels in MHE operation and maintenance functions. This course will provide with an in-house trainer who will have both factual knowledge as well as the ability to present

the material to your lift-truck (MHE) operators.

DETAILS OF TRAINING MODULE : The MHE Operator Training Program includes classroom theory and practical evaluation. The duration of the operator training program will be around three to five days depending on requirements. This course is designed for both new and experienced operators covering theoretical and practical principles. The program will be specifically geared to the actual application and equipments being used, and will enhance and revive the operator's awareness of safe MHE operations. Jost's can also conduct pre-training audit to determine the need for the training.

Josts MHE Operator Training Module :

Know your Trucks :

- What is MHE? What are the various types of MHE ?
- How does the MHE work ?
- How does it carry and lift load ? What is the difference between an Automobile and MHE ?
- Why and how battery is used as a power source for the equipment ?

Basic Awareness About Key Features of the Equipment: It is a proven fact that there is a direct co-relation between operator's knowledge of their truck and the performance of the trucks in terms of efficiency and productivity. The training will enhance operator's component level knowledge in hydraulics, mechanics, electrical and electronics. The training will also enable the operator to emerge with a better understanding of the equipment used by him and learn to appreciate many aspects of MHE like stability triangles / trapezoids, load distribution, load balancing, residual capacities etc.

MHE Operation : Safe and best operating practices laid down in the manufacturer's recommendations will be emphasised and promoted in classroom and practical training. Josts will also impart training on the hazards and responses to emergencies in equipment use.

MHE Maintenance : Operators are the ear and eye of the equipment. During the training course, the operator will get to know about the importance of maintenance, the proper care and procedure of maintenance.

Case Studies of Effects of Improper Usage : Group discussion on experiences of actual incidents will be used to help operators to improve their operation skills and thus minimizing the errors during operation.

Course Test and Evaluation : By evaluating the performance of the operators through scientific process, Josts will provide data on their strength and weaknesses that will highlight those areas where the operator needs to improve their operating skills. After successful completion of this training course, Jost's will issue certificates with grading to the participants.

Post-Training Module : Jost's will send written documentation of significant positive or negative changes in the performance of the operators after the training, and a re-assessment of each operator's skills can be conducted every six months.

Benefits to the organization :-

- Enhancement of operators confidence and improvement in operating culture.
- Reduction in downtime of the equipment and improvements in over all life cycle period.
- Identification of problems at an early stage with well trained operators - Better response with a logical approach, without panicking, while facing emergency situations.
- Embedding the onus of ownership quality in operators mind.
- Reduction in overall operating costs, due to proper use of equipments.
- Improvement in safety records and enhancement in output.

Through the years, many of Jost's esteemed customers like Asian Paints Ltd., Nokia India Pvt. Ltd., Hindalco Inds. Ltd., Perfetti Van Melle, Weilburger Coatings, Bennett Coleman & Co. Ltd., ITC Ltd., YCH Logistics (I) Pvt. Ltd., BLG Parekh Logistics Pvt Ltd. etc., have reaped the benefits of this training module. Jost's post training module periodically monitors the performance of the operator, based on which recommendation on improvements can be made.
